

BEAN — Cafe.pi Ecosystem Utility Token White Paper

Version: v0.2 (Draft) · **Date:** 2026-06-17 · **Source language:** Korean (ko) — this English (en) text is a translation

Status: Draft · ⚠️ **Pending legal review** (wording in §3, §6, §10 to be finalized after counsel) · Awaiting Mainnet Launchpad GA

Related: docs/PRD_12_TOKEN.md v1.9 (internal requirements) · docs/PRD_12_TOKEN_법무자문의뢰서.md (legal inquiry)

Note: The Korean edition (docs/PRD_12_TOKEN_백서.md) is authoritative; in case of discrepancy, the Korean text governs.

Important Notice: This white paper is for **informational purposes only** and is **not** an offer, solicitation, or invitation to invest. BEAN is a **utility token for ecosystem access that does not promise any return**. See §10 for the full disclaimer.

1. Abstract

BEAN is the ecosystem **utility token** of **Cafe.pi**, a community and commerce platform built on the Pi Network Mainnet. BEAN is **not a fundraising instrument**; it is a tool that mediates **peer-to-peer support, rewards, and feature access** within Cafe.pi.

BEAN extends "**Pi Bean**" (🌸), an in-app appreciation unit already in use on Cafe.pi, into an on-chain token, giving it immediate utility on top of a working product. Issuance occurs through the official Pi

Network **Launchpad**, consistent with the Launchpad's **Product-First** principle — tokens serve user acquisition and product utility, not capital raising.

Key	Value
Token name	BEAN
Chain	Pi Network (Stellar-based) · Soroban smart contracts
Total supply	1,000,000,000 BEAN (1 billion, fixed)
Base pair	Pi (BEAN/Pi only)
Nature	Utility token (access · rewards · support)

2. Background — The Cafe.pi Ecosystem

Cafe.pi is an **online community plus O2O marketplace** running on the Pi Network Mainnet.

Component	Description
PiChat (Cafés)	Theme-based real-time communities for Pi users who share interests
PiShop (Marketplace)	Pi-settled P2P trading plus O2O offline-store commerce
PiVoice (Voice Chat)	WebRTC-based N:N voice channels
Events & Missions	Activity rewards and community engagement

Cafe.pi already operates a **Pi Bean appreciation feature** — a culture in which users send small amounts to those who provide good content or help. Today, however, Bean is only an in-app display unit and lacks the **transferability, interoperability, and transparency** of an on-chain asset.

BEAN brings this proven appreciation culture on-chain, unifying support, rewards, and feature access into a single standard unit.

3. BEAN Token Definition (Utility)

BEAN's **primary purpose is utility** — access and rewards within the Cafe.pi ecosystem, not financial return.

- **✓ Access:** use of and discounts on café/marketplace/voice features · **global real-time translation (PiTranslate)** · **payment of marketplace buy/sell fees**
- **✓ Support:** peer-to-peer Bean support (on-chain version of the existing Pi Bean) · **charitable giving via donations**
- **✓ Rewards:** rewards for missions/events/community contribution · **review (user feedback) rewards** · **sales coupon/stamp rewards**
- **✓ (Future) Governance:** ecosystem policy voting rights (**separate** from any economic right)

BEAN **provides no dividend, interest, or revenue share**, and the issuer does not promise, or undertake efforts to bring about, any increase in BEAN's market price. (See §10.)

Relationship to the Existing Pi Bean (Unit Alignment)

With the on-chain transition, the in-app appreciation unit is aligned as follows:

1 Pi = 100 BEAN

Existing support of 0.1 / 0.5 / 1 Pi → 10 / 50 / 100 BEAN

This alignment preserves the support experience users already know while simplifying the unit to whole numbers.

4. Utility Use Cases

#	Use case	Description
1	Support (Tip)	Send BEAN to café/content contributors (on-chain Pi Bean)
2	Donation	Channel BEAN donations into fundraising/charity campaigns — a community channel for social contribution
3	Feature access	Unlock premium themes, stickers, AI assistant, and more
4	Global translation (PiTranslate)	Pay for real-time translation usage
5	Marketplace fees	Pay PiShop buy/sell fees in BEAN
6	Mission/event rewards	BEAN distributed as activity rewards (funded by the Ecosystem Reserve)
7	Review rewards	Reward café/store/product review contributions with BEAN
8	Sales coupon/stamp rewards	Convert O2O offline-store purchase stamps/coupons into BEAN
9	(Future) Governance	Vote on ecosystem policy and roadmap

All use cases are **consumption/usage oriented** and do not presuppose financial return from holding.

5. Tokenomics

5.1 Core Parameters

Item	Value
Total supply	1,000,000,000 BEAN (fixed, no further minting)
Decimals	7 (1 BEAN = 10,000,000 units, i128)
Base pair	Pi
Participation unit (sale)	0.01 Pi / BEAN

5.2 Distribution

Category	Share	Amount	Lockup/Vesting	Purpose
Launchpad Sale	40%	400,000,000	immediate ~ short cliff	community distribution & participation
Ecosystem Reserve	25%	250,000,000	3–4 year linear release	user rewards & mission funding
Liquidity Pool	15%	150,000,000	permanently locked	BEAN/Pi liquidity
Marketing/Partnerships	12%	120,000,000	12-month lock	ecosystem partnerships & community
Team/Foundation	8%	80,000,000	6-month cliff + 36-month linear	long-term operational alignment

Design principle: the insider (team) share is minimized to 8% while ecosystem/community allocation (sale + reserve = 65%) is kept large, making the **utility-centered distribution** explicit.

5.3 Team Vesting

Phase	Period	Release
Cliff	0–6 months	0%
Year 1	6–12 months	25% (6.25%/quarter)
Year 2	1–2 years	50% (6.25%/quarter)
Year 3	2–3 years	25% (6.25%/quarter)

6. Distribution & Launchpad Participation

BEAN is distributed through the official Pi Network **Launchpad**.

- **Fair-Access:** participants choose a commitment amount (1–500 Pi), and the Launchpad automatically computes a holding ratio based on that commitment, **preventing a small number of large participants from dominating**.
- **Liquidity deposit:** the Pi gathered from participation is **not received directly by the issuer; it is deposited into a liquidity pool** — the core of the Launchpad structure, which structurally ensures

the token serves ecosystem liquidity and utility rather than capital raising.

- **Liquidity pair:** BEAN/Pi **only**. (No pairs with non-Pi cryptocurrencies or fiat-pegged assets are operated.)

The participation unit (0.01 Pi/BEAN) is an **ecosystem participation parameter**; it does not indicate any future market price or return.

7. Technical Architecture

- **Chain:** Pi Network (based on the Stellar Consensus Protocol)
- **Contracts:** Soroban smart contracts (same environment as Cafe.pi's PiRC2 subscription contract)
- **Unit system:** 1 BEAN = 10,000,000 units (i128), aligned with Pi's unit system
- **Overflow safety:** total supply of 1B BEAN = 10^{16} units $\ll$ i128 max ($\sim 1.7 \times 10^{38}$) $\rightarrow$ safe
- **Standard functions:** mint (fixed total), transfer, approve/transferFrom, balance queries

Deployment proceeds as: Testnet development & testing $\rightarrow$ PiRC community public review $\rightarrow$ external security audit $\rightarrow$ Mainnet deployment.

8. Governance (Future)

Initially, BEAN centers on access and support; governance is introduced gradually as the ecosystem matures. Governance voting rights are **clearly separated from any economic right** and confer no financial entitlement from holding.

9. Roadmap

Stage	Content	Status
Planning/Docs	tokenomics, positioning, technical design	✅ Done
Legal review	securities/regulatory counsel	♦ In progress (required before Mainnet sale)
Contract dev	Soroban Testnet deployment & testing	⌚ Pending
Security audit	external audit	⌚ Pending
Launchpad application	after Mainnet Launchpad GA	⌚ Awaiting GA (expected after Jun 28)
Mainnet issuance	token issuance & liquidity opening	⌚ Pending
Ecosystem integration	support/rewards/feature-access wiring	⌚ Pending

10. Risks & Legal Disclaimer

⚠ This section is a **draft** and will be **finalized after legal counsel (§8-1-1 of the internal PRD)**.

- **Not an investment / not a security:** BEAN is a **utility token**, not an investment product. This white paper is not an offer or solicitation to invest.
- **No return promised:** the issuer does not guarantee the value or price of BEAN and provides no dividend, interest, or revenue share.
- **Value volatility:** the token's value may fluctuate; participants act at their own judgment and risk.
- **Regulatory risk:** token regulation varies by jurisdiction and may change. Participation may be restricted in some jurisdictions.
- **Technical risk:** smart contracts undergo security audits, but technical risk cannot be entirely excluded.
- **Subject to change:** the contents of this white paper (including tokenomics and roadmap) may change according to regulatory, technical, and ecosystem conditions.

11. Glossary

Term	Definition
BEAN	Cafe.pi ecosystem utility token
Pi Bean	Cafe.pi in-app appreciation feature (predecessor of BEAN)
Launchpad	Pi Network's official token issuance and fair-distribution platform
Fair-Access	automatic holding-ratio calculation based on commitment (anti-domination)
Soroban	the smart contract platform of the Stellar/Pi blockchain
i128	128-bit integer — used to represent token units

Next: ① incorporate legal counsel (finalize §3, §6, §10) ② keep in sync with the Korean source ③ finalize as an attachment for the Launchpad application after GA.
